

Northwind Quarterly Review

Prepared for the operations meeting · Q3

1. Summary

Revenue rose across all three regions this quarter, with the strongest growth in the north, where two new accounts opened in July. Costs held flat against the previous quarter despite the additional headcount, so the margin widened by rather more than the board had been asked to expect. The figures below are unaudited and will be restated once the year-end close is done.

2. Key figures

Revenue	£1,284,000
Cost of sales	£731,500
Gross margin	43.0 per cent
Headcount	48
Prepared by	operations@example.com

3. How the total is worked out

The figure above comes straight out of the ledger, rounded once at the end rather than per line:

```
totals.py

# quarterly totals, rounded to whole pounds
def total(rows):
    return round(sum(r.amount for r in rows))

print("Quarter total:", total(ledger))
```
